

## **Content & Artwork for MOD (Manufacture On Demand)**

This document provides details on how Acutrack's MOD service handles content and artwork when you submit an order transaction for production and fulfillment of CD, DVDs or Blu-rays.

If you are using Acutrack's XML based API, you have the option to pass the content and artwork dynamically as a path where we can download, produce and fulfill the product. Alternatively, you have the option to set up products using our portal:

### Configuration using our portal

We provide you with an online portal where you can configure each SKU. However, in this method, the content and artwork should be stored in the cloud and provided to us as a path to download. This gives you the flexibility to configure and add new products as needed.

### **Packaging Options**

You have the following packaging options

Single disc:

- Paper sleeve
- Jewel case with 2 panel insert & tray card
- DVD case with custom printed cover wrap
- Blu-ray case with custom printed cover wrap

Multi-disc packaging:

- ACE3 DVD case which hold up to 3 discs
- ACE12 DVD case which hold up to 12 discs

### **How should you prepare the disc content?**

You provide us the content as a path to download. However, this content must be provided as an ISO disc image or ZIP file. For audio titles, we currently do not support the options to configure using our portal. Therefore, you must choose to configure by sending us your content so the Acutrack team can configure it.

### **How should you prepare the artwork for disc & packaging?**

All disc and packaging artwork must follow our template and should be provided as a JPEG file. You can access these templates by pressing these links:
